

**Required Homework Format** (also see book section on Problem Solving):

1. You may lose points on your homework if you do not follow these instructions carefully.
2. Name and date in upper right hand corner on every page. Please staple pages together at upper left edge (no bindings or paper clips, please).
3. Homework assignment number clearly labeled on upper left of first page.
4. Please write legibly in dark pencil or pen. Print (no cursive) with decent size.
5. Identify each problem clearly.
6. Please box the results using proper significant digits and show the units.
7. For solving problems follow the format in the textbook.
8. State the problem (what's given), including a sketch of the system as appropriate.
9. State the required results.
10. List any significant assumptions employed.
11. In the analysis, clearly identify what you are doing. Do not string together formulas without connecting them properly with explanation text. Justify the use of formulas.
12. Add comments to results when appropriate. Do the results appear reasonable? Are the assumptions reasonable?

*Homework assignments are due **that class period**. Assignments turned in after class, but on the same day will be penalized up to 20%. Assignments will not be accepted after the due date.*
